

RESEARCH 2

ACADEMIC

Grade 11/12

Curriculum Guide

RESEARCH 2
Prerequisite: Research 1

Course Description:

This course develops the learners' critical thinking, analytical, and problem-solving skills through the implementation of the research process. It focuses on the development and validation of research instruments, systematic data collection, and the analysis and interpretation of data using appropriate methods.

The course emphasizes evidence-based reasoning, enabling learners to identify patterns, explain findings, and relate results to research questions and existing literature. The learners produce a complete research report and effectively present and defend their study while applying ethical research practices.

Elective: Academic

Time Allotment: 80 hours for one term

CONTENT DOMAIN	CONTENT STANDARDS <i>The learners demonstrate understanding of ...</i>	LEARNING COMPETENCIES <i>The learners ...</i>	SUGGESTED OUTPUT
Instrument Development and Validation	1. how to develop and refine appropriate research instruments for collecting valid and reliable data.	1. refine the research plan based on the approved research proposal. 2. design appropriate research instruments such as surveys, interview guides, and observation checklists. 3. evaluate validity and reliability of research instruments. 4. revise research instruments based on pilot testing results.	• Refined research plan • Developed research instruments • Pilot testing results and revisions
Data Collection	2. systematic and ethical procedures in collecting research data.	5. prepare the necessary materials and procedures for data collection. 6. apply ethical considerations during the data-gathering process. 7. record and organize collected data systematically for analysis.	• Data collection plan • Ethical clearance documents • Organized raw data sets

CONTENT DOMAIN	CONTENT STANDARDS <i>The learners demonstrate understanding of ...</i>	LEARNING COMPETENCIES <i>The learners ...</i>	SUGGESTED OUTPUT
Data Analysis and Interpretation	3. appropriate methods for analyzing and interpreting research data.	8. analyze data using appropriate quantitative or qualitative methods. 9. interpret research findings using evidence-based reasoning. 10. evaluate the validity and relevance of findings. 11. identify patterns, trends, and relationships in the data. 12. relate findings to research questions and reviewed literature. 13. explain possible reasons for the results obtained.	• Data analysis report with tables, graphs, or themes • Analytical discussion of findings • Interpretation linked to research questions and literature • Discussion of results and their implications
Writing the Research Report	4. conventions and structure of writing a complete research report.	14. present results and discussion of the research clearly and logically. 15. formulate appropriate conclusions and recommendations based on the research findings. 16. prepare complete and properly formatted references and appendices.	• Complete research paper draft • Finalized research paper • Complete references and appendices
Research Presentation and Defense	5. how to organize, present, and reflect on research findings.	17. present research findings effectively. 18. defend the research by responding to questions. 19. reflect on the research process and identify areas for improvement.	• Oral presentation and defense • Responses to panel questions • Reflection paper • Revised research paper
PERFORMANCE STANDARDS: The learners can produce and effectively present a complete research paper that demonstrates systematic data collection and in-depth analysis, provides well-supported conclusions and recommendations, and reflects responsible research practices, including ethical considerations and evidence-based reasoning.
