

FUNDAMENTALS OF BASIC LIFE SUPPORT

ACADEMIC

Grade 11/12

Curriculum Guide

FUNDAMENTALS OF BASIC LIFE SUPPORT

Pre-requisite: None

Course Description:

Fundamentals of Basic Life Support equips learners with essential life-saving knowledge and skills needed to respond effectively to emergencies. The course covers Emergency Action Principles, Basic Life Support (BLS), Foreign Body Airway Obstruction (FBAO) management, triage systems, and safe transfer techniques, enabling students to assess situations, provide CPR and rescue breathing, relieve airway obstruction, prioritize victims in mass-casualty scenarios, and safely move injured persons. Through hands-on practice and simulations, learners develop competence and confidence to perform timely and appropriate response to emergency situations.

Elective: Academic

Time Allotment: 80 hours for one term

Content Standard:

- The learners demonstrate understanding of Emergency Action Principles, Basic Life Support (BLS) skills and Foreign Body Airway Obstruction (FBAO), the triage system, and procedures for emergency rescue Management, ensuring a prompt and proper response during emergencies.

Performance Standard:

- The learners demonstrate Basic Life Support (BLS) and Foreign Body Airway Obstruction (FBAO) Management skills, ensuring a prompt and proper response during emergencies.

LEARNING COMPETENCIES	CONTENT
<i>The learners...</i> 1. describe the concepts and importance of Emergency Action Principles;	Concepts and Importance of Emergency Action Principles Emergency Action Principles • Scene Safety • Activate Medical Assistance or Transfer Facility • Primary Survey • Secondary Survey
2. discuss the principles and importance of Basic Life Support;	Principles and Importance of Basic Life Support (BLS) ○ Importance of Primary and Secondary Care ○ Protective Barriers Basic Life Support (BLS) • Cardiopulmonary Resuscitation (CPR), - Chain of Survival • Rescue Breathing (RB) - Opening the Airway (Head-Tilt-Chin-Lift Maneuver) - Assessment (Look, Listen, Feel) Activation of Rescue Breathing
3. demonstrate the key steps and techniques involved in Foreign Body Airway Obstruction (FBAO) Management;	Foreign Body Airway Obstruction (FBAO) Management/ Choking • Types of Obstruction (Anatomical and Mechanical) • Severity Assessment • Steps and/or First Aid Management and Recovery - Back Slapping, Heimlich Maneuver/Abdominal Thrust, Chest Compression/Chest Thrust, - Self-administered Abdominal Thrust

LEARNING COMPETENCIES	CONTENT
4. execute properly Cardiopulmonary Resuscitation (CPR) and Rescue Breathing (RB) with the use of different approaches;	Basic Life Support Management Skills • Cardiopulmonary Resuscitation • Rescue Breathing Cardiopulmonary Resuscitation (CPR) • Hands only or Compression only CPR • CPR with Automated External Defibrillator Procedures Rescue Breathing (RB) • Mouth-to-mouth • Mouth-to-nose • Mouth-to-mouth and nose
5. examine the triage system related to injury management;	TRIAGE SYSTEM • START (Simple Triage and Rapid Treatment) • MCI (Mass Casualty Incident)
6. execute transfer techniques for injured persons; and	Transfer Techniques of Injured Persons • Lifting and Carries Spine Board/Stretcher/Blanket
7. simulate the Emergency Action Principles, triage system, and procedures for emergency rescue and transfer.	Emergency Action Principles Triage System Management Skills • START (Simple Triage and Rapid Treatment) • MCI (Mass Casualty Incident) Care and Transfer Techniques • One-man Assist/Carries/Drags • Two-man Assist Carry • Three-man Carries • Four-man Carries • Commercial stretcher • Ambulance or Other Vehicle • Commercial stretcher • Blanket with 2 Poles

GLOSSARY

Abdominal Binder refer to a wide bandage used to support the abdomen, typically after surgery or injury. It provides stability, reduces strain, and prevents movement that could cause pain or discomfort.

Automated External Defibrillator (AED) is a portable medical device designed to analyze the heart's rhythm and, if necessary, deliver an electric shock (defibrillation) to help restore a normal heart rhythm in cases of sudden cardiac arrest (SCA).

Back slapping is used to treat mild choking in infants by giving five back blows between the shoulder blades.

Basic Life Support (BLS) is the initial, non-invasive intervention given to individuals experiencing cardiac arrest or respiratory failure, aiming to restore normal circulation and breathing until more advanced medical help arrives.

Bone Injury refers to damage to the bones resulting from trauma, such as fractures, dislocations, or bone contusions.

Broad Cravat refers to a type of cravat bandage where the triangular bandage is folded to create a wider, broader strip.

Cardiopulmonary Resuscitation (CPR) is an emergency life-saving procedure performed when the heart stops beating. It involves chest compressions, rescue breathing, or both to maintain circulation and oxygenation of the brain and other vital organs.

Cardiopulmonary Resuscitation (CPR) refers to a combination of chest compressions and, if needed, rescue breathing to restore blood circulation and oxygenation when someone's heart or breathing stops.

Chain of Survival refers to a series of critical steps to improve the chances of survival for someone experiencing a life-threatening medical emergency.

Chest Compressions are a critical component of CPR where the rescuer pushes down on the chest to simulate the heart's pumping action and maintain blood circulation.

Chest Thrusts refer to a technique used for choking in pregnant individuals or obese persons who cannot be treated with the Heimlich maneuver.

Commercial Stretcher refers to a medical stretcher typically used for patient transport, often found in ambulances or hospitals.

First Aid Management refers to the immediate care given to an injured or ill person until professional medical help can be provided.

First Aid is the immediate care given to an injured or ill person before professional medical help arrives.

Foreign Body Airway Obstruction (FBAO) / Choking occurs when an object blocks the airway, preventing airflow. It can be caused by food, objects, or other material obstructing the trachea.

Fracture refers to a break or crack in a bone. Fractures can occur in various forms, such as:

Good First Aider is an individual who is calm, knowledgeable, observant, confident, and capable of performing first aid efficiently.

Hands-only or Compression-Only CPR refers to a type of CPR recommended for untrained bystanders. It involves only chest compressions, without rescue breaths, to maintain circulation until professional help arrives.

Heat-related injuries are conditions that occur due to excessive heat exposure, which can lead to dehydration, electrolyte imbalance, and organ failure.

Heimlich Maneuver / Abdominal Thrusts refer to a first aid procedure to treat severe choking in adults and children over 1 year of age. The rescuer performs abdominal thrusts to force air out of the lungs, expelling the object blocking the airway.

Hindrances are barriers such as fear of doing harm, lack of knowledge, absence of equipment, or emotional stress that prevent effective first aid delivery.

Head Injury refers to trauma to the head, which can affect the scalp, skull, or brain. Common types include:

MCI (Mass Casualty Incident) involves multiple victims, such as natural disasters, accidents, or terrorist attacks, that overwhelm the available medical resources.

Muscle Cramps are sudden, involuntary contractions of a muscle that cause pain and stiffness, often resulting from dehydration, overuse, or an imbalance in electrolytes.

Observation Skills refer to recognizing the signs and symptoms of injuries or illnesses.

Primary Care is health care provided by a medical professional (such as a general practitioner, pediatrician, or nurse) with whom a patient has initial contact and by whom the patient may be referred to a specialist.

Proper Wound Care refers to the process of cleaning, treating, and dressing a wound to promote healing and prevent infection.

Rescue Breathing (RB) is the act of providing breaths to a person who is not breathing or not breathing adequately. This can be done mouth-to-mouth or with a bag-valve-mask (BVM).

Recovery position is putting someone in the recovery position will keep their airway clear and open. It also ensures that any vomit or fluid won't cause them to choke.

Roller Bandage: refers to a bandage that is rolled up in a cylindrical form, often used for wrapping wounds or limbs. It can be used for securing dressings, applying pressure, or immobilizing injuries. Common types include elastic bandages or gauze rolls.

Roles refer to promptly and responsibly assessing the situation and providing appropriate care.

Responsibilities refers to ensuring safety, performing first aid within their knowledge and skill level, and seeking professional help when needed.

Safety is the condition of being safe from undergoing or causing hurt, injury, or loss.

Secondary Care is medical care provided by a specialist or facility upon referral by a primary care physician.

Self-administered abdominal Thrusts are performed when a person who is choking and is conscious uses their own hands to apply upward pressure on the abdomen, forcing air from the lungs to expel the object.

Shock refers to a medical emergency where the body's organs and tissues do not receive enough blood flow, causing organs to malfunction. It can be caused by severe blood loss, infection, allergic reaction, or trauma. Common types include:

Triage refers to the process of sorting and prioritizing patients based on the severity of their injuries or medical conditions, especially in mass casualty situations. The goal is to ensure that the most critically ill or injured individuals receive immediate care, while less critical patients are treated later or evacuated based on available resources.

Two-man assist-carry is a method used when two rescuers are available to assist with carrying the victim.

Upper Extremity refers to injuries of the arm, including fractures of the humerus, radius, ulna, or collarbone. These are typically splinted using a rigid splint, a sling, or a bandage.
